

Joe Holbrook Memorial Invitational Competition

7th Grade

March 19, 2023

General Rules

- You will have **90 minutes** to solve **16 questions**. Your score is the number of correct answers.
- Only answers recorded on the answer sheet will be graded.
- This is an individual test. Anyone caught communicating with another student will be removed from the exam and their score will be disqualified.
- You may use the following aids:
 - Pencil or other writing utensil
 - Eraser
 - Blank scrap paper
- You may not use the following aids:
 - Other people
 - Calculator or other computing device
 - Compass
 - Protractor
 - Ruler or straightedge

Other Notes

- Write legibly. If the graders cannot read your answer, you will be given no credit for that question.
- **All answers are integers.**
- You do not need to write units in your answers.
- Ties will be broken by the number of correct responses to the last 4 problems. Further ties will be broken by the number of correct responses to the previous 4 problems, etc.
- Keep in mind that the JHMIC is a difficult contest and very different from school assessments. If you even get a few questions right, you should feel proud of yourself!

1. Charles is a very indecisive person. He has to choose one out of three books to read. There are 11 copies of the first book, and 15 copies of another. If there are a total of 50 books and Charles is equally likely to choose any of the 50 books to read, the probability that Charles chooses the third type of book is $\frac{a}{b}$ where a and b are relatively prime. What is $a + b$?
2. In my drawer, I have 17 unique triplets of socks. If I randomly take socks out of my drawer, how many must I take to guarantee I have a matching triplet?
3. Square $ABCD$ has side length 4 and a point P inside it. What is the area of triangle ABP plus the area of CDP ?
4. Violet has been rolling on a slope at 50 miles per hour for 5 minutes. If the slope is 10 miles long, what does her average speed need to be during the rest of her trip so that she reaches the end of the slope in exactly 10 minutes?
5. A number is called “alternative” if its digits alternate between two distinct values such that the preceding and succeeding digit of a number are necessarily the same. As an example, 3737 is an alternative number, but 2494 and 2222 is not. How many six digit alternative numbers are divisible by 4 if numbers can begin with 0?
6. How many 5 letter sequences of the letters $A, B, C,$ and D have an even number of A 's? Note that zero is an even number.
7. Call a natural number n “magic” if it is a perfect square, divisible by 6, and a multiple of 5. How many magic numbers are there that are less than 10000?
8. Peter has a collection of foxes and rabbits. He says three statements:
 - The number of foxes is 20 more than the number of rabbits.
 - The number of foxes is equal to the number of rabbits squared.
 - The number of foxes is equal to six times the number of rabbits.However, it is revealed that one of Peter's statements is false, while the other two are true. What is the maximum number of foxes Peter has?
9. For how many positive integers n less than 1000 is $\text{lcm}(90, n) = 5n$?
10. Four circles of radius 4 are internally tangent to a circle of radius r , with each of the smaller circles externally tangent to two others. If r is written as $a + b\sqrt{c}$ for positive integers a, b, c with c squarefree, then find $a + b + c$.
11. Consider the set of all parallelograms that have the points $(1, 2), (2, 5), (-5, 2)$ among its vertices. Compute the sum of the areas of all of these parallelograms.
12. Nikhil can paint a room in x hours, Jaiden can paint the same room in y hours, and working together, they can paint the same room in xy hours (where x and y are real numbers). What is the maximum amount of minutes it could take them to paint the room together?
13. The integer n is the smallest positive multiple of 24 such that each digit is either 2 or 3. Compute $\frac{n}{24}$.
14. How many distinct terms are there in the sequence $\left\lfloor \frac{n^2}{2022} \right\rfloor$ as n goes from 1 to 2022? ($\lfloor x \rfloor$ denotes the largest integer less than or equal to x . For example, $\lfloor 20.345 \rfloor = 20$).
15. There are 7 people in a circle passing one ball around. A person cannot pass the ball to someone adjacent to them, and a person cannot pass the ball to themselves. How many ways can the ball be passed around so that the ball starts and ends at the same person and is passed a total of 7 times?
16. In triangle ABC , the angle bisector of $\angle BCA$ intersects AB at D and the circumcircle at E . Given that $AB = 33, AC = 28, BC = 16,$ and $CD = 14,$ what is BE ?
